asymptotics, is a method of describing limiting behavior.. As an illustration, suppose that we are interested in the properties of a function  $f(n)$  as  $n$  becomes very large. If  $f(n) = n^2 + 3n$ , then as  $n$  becomes very large, the term  $3n$  becomes insignificant compared to  $n^2$ . The function  $f(n)$  is said to be "asymptotically equivalent to  $n^2$  ...

### **Asymptotic analysis - Wikipedia**

In statistics, asymptotic theory, or large sample theory, is a framework for assessing properties of estimators and statistical tests. Within this framework, it is typically assumed that the sample size  $n$  grows indefinitely; the properties of estimators and tests are then evaluated in the limit as  $n \rightarrow \infty$ . In practice, a limit evaluation is treated as being approximately valid for large finite sample sizes, as well.

$f(n)=c*n^2$ , etc.) refers to the growth of  $f(n)$  as  $n$  gets large. We typically ignore small values of  $n$ , since we are usually interested in estimating how slow the program will be on large inputs. A good rule of thumb is: the slower the asymptotic growth rate, the better the ...
