Lesson 14: Solving Inequalities Student Outcomes Students learn if-then moves using the addition and multiplication properties of inequality to solve inequalities and graph the solution sets on the number line. Classwork Exercise 1 (5 minutes) Allow students time to work through the warm-up individually. Then, discuss the results.

Lesson 14: Solving Inequalities - EngageNY

Lesson Summary The goal to solving inequalities is to use If-then moves to make 0s and 1s to get the inequality into the form $x > a$ number or $x < a$ number. Adding or subtracting opposites will make 0s. According to the If-then move, a number that is added or subtracted to each side of an inequality does not change the solution of the inequality.

LESSON 14: SOLVING INEQUALITIES - kyrene.org

Lesson Summary The key to solving inequalities is to use if-then moves to make $x > s$ and $x < s$ to get the inequality into the form $x > a$ or $x < a$ where a is a number. Adding or subtracting opposites will make $x > s$.

inequalities lesson 14

Our Inequalities lesson plan begins by defining an inequality and reminds students that they solve inequalities just like equations. Then the lesson discusses the two ways inequalities are different from equations. First, they use different symbols and second, solving an inequality means finding all of its solutions.

Slide 6: We will solve these four problems, highlighting their similarities and differences. For the two inequality problems, I will ask students to populate a list of different solutions that would keep the the inequality true. I will tell students to solve the inequalities on Slide 9 independently, but to check their answer with a test point ...

Eighth grade Lesson Solving Linear Inequalities | BetterLesson

This warm-up highlights the link between an inequality and its associated equation. This will be solidified throughout the lesson as students solve the associated equation and reason in context to determine the direction of inequality. Notice students who use the value -10 as a boundary as they test values to find solutions to the inequalities.

In this math lesson you will learn about the different types of inequalities, the rules for inequalities, solving inequalities, and solving double inequalities, and what a inequality is.

Lesson 9 Unit 1: Inequalities

Solving inequalities is very like solving equations... we do most of the same things..... but we must also pay attention to the direction of the inequality. Direction: Which way the arrow "points" Some things can change the direction!

To solve the inequality, we can check numbers greater than 2 and less than 2 and see which ones make the inequality true. Let's check a number that is greater than 2:. Replacing with 5 in the inequality, we get or just. This is true, so is a solution.
