Mechanics has so far developed two standard methods for the determination of static fracture toughness of rock. They used three different core-based specimens and tests were to be performed on a typical laboratory compression or tension load frame. Another method to determine the mode I fracture toughness of rock using semi-circular

Determining the value of donated property would be a simple matter if you could rely only on fixed formulas, rules, or methods.

Usually it is not that simple. Using such formulas, etc., seldom results in an acceptable determination of FMV.

There is no single formula that always applies when determining the value
