Therefore, corotating machines can be operated at much higher screw speeds with greater throughputs. A typical corotating, self-wiping, twin-screw extruder with 170-mm-diameter screws can process 9000-11,000 lb/hr of polypropylene at a screw speed of 300 rpm. Source: N. P. Twin Screw Extruder VS Single Screw Extruder - Kerke Extrusion
Shortly after, Roberto Colombo of LMP developed the first twin screw extruders in Italy. Process. In the extrusion of plastics, the raw compound material is commonly in the form of nurdles (small beads, often called resin) that are gravity fed from a top mounted hopper into the barrel of the extruder. Additives such as colorants and UV inhibitors (in either liquid or pellet form) are often used and can be mixed into the resin prior to arriving at the hopper.
